

LOVELY JOY FIGUERAS

SOFTWARE ENGINEER

Pasig City, Philippines | lovelyfigueras@gmail.com | +63 9311273321 | LinkedIn | GitHub

SUMMARY

Software Engineer with 5 years of experience, focused primarily on Android and mobile development, with full-stack web experience as well. Skilled in Kotlin/Java Android development, REST API integration, and secure payment systems, including hands-on EMV certification work across multiple device vendors. I automate Android build and release pipelines in Azure DevOps and bring AI tools (GitHub Copilot, Claude Code) into my daily development workflow. Comfortable working in Agile teams and owning problems end-to-end, from root-cause investigation to production release.

EXPERIENCE

Android Developer — Serino Systems, Inc.

January 2023 – Present

Kotlin, Java, JavaScript, Android, Azure DevOps, CI/CD, EMV, Firebase Crashlytics, Agile

- Build and maintain features for production payment applications, supporting reliable, secure transaction processing for live merchant transactions.
- Implement and validate EMV certification fixes against card-brand specifications (Visa, Mastercard, and others) across multiple device vendors, ensuring compliance and successful certification audits.
- Build and automate APK build & release pipelines in Azure DevOps (automated builds and version management), reducing manual steps for the Android team.
- Investigate production issues and deliver hotfixes and feature enhancements across multiple device platforms.
- Monitor production app stability with Firebase Crashlytics, triaging crash reports and logs to investigate and resolve issues.
- Optimize multi-layered application architecture to improve transaction reliability and application stability.
- Integrate AI capabilities into production features and use GitHub Copilot and Claude Code to accelerate development.
- Collaborate with cross-functional teams on complex payment components and transaction workflows.

Junior Android Engineer — RiderKo

August 2021 – January 2023

Kotlin, REST APIs, Retrofit, MVP, Google Analytics, Facebook SDK, Agile

- Developed and maintained Android application features using Kotlin and MVP architecture.
- Integrated REST APIs with Retrofit to support transaction workflows and user data, improving reliability of data exchange across app features.
- Investigated performance issues and improved application responsiveness and reliability.
- Integrated Google Analytics and the Facebook SDK (AppEventsLogger) to track installs, purchases, and custom events for product insights.

Full-Stack Web Developer — Editmode (Remote)

February 2021 – August 2021

Ruby on Rails, JavaScript, Tailwind UI, Alpine.js, MVC, Agile

- Built responsive front-end UI components using Tailwind UI and Alpine.js.
- Developed back-end functionality with Ruby on Rails using the MVC pattern — models, controllers, routing, and server-side logic.
- Improved SEO and maintained functionality across production web systems.

TECHNICAL SKILLS

Mobile	Kotlin, Java, Android, Jetpack Compose, MVVM, MVP
Payments	EMV Certification, Secure Transaction Systems
Integration	REST APIs, Retrofit, Firebase Crashlytics, Google Analytics
Database	PostgreSQL
Web	Ruby on Rails, Hotwire (Turbo/Stimulus), JavaScript, Tailwind, Alpine.js, MVC
AI Tools	GitHub Copilot, Claude Code
DevOps	Azure DevOps, CI/CD & Build Automation, Git
Methodologies	Agile Development

PROJECTS

Baking Recipe Keeper — Android App

[GitHub](#)

Kotlin, Jetpack Compose, Material 3, MVVM + StateFlow, Room, Coroutines

- Offline-first baking recipe app with live serving & unit conversion, favorites and tags, shopping lists, a photo/video gallery, and backup & restore; shipped a signed APK release.

GWeather — Android App

[GitHub](#)

Kotlin, Jetpack Compose, MVVM, Retrofit/Moshi, Room, Navigation Compose

- Real-time weather app built with Jetpack Compose and MVVM, integrating the OpenWeather API (Retrofit/Moshi) with location services and a locally stored history in Room; covered by unit tests.

SeatMate PH — Business Landing Site

[GitHub](#) · [Live](#)

Ruby on Rails, Hotwire (Turbo + Stimulus), Tailwind CSS (live in production)

- Responsive marketing site for a van-rental and land-transfer business, built with Ruby on Rails and Hotwire — step-by-step booking flow, route-based pricing, and Messenger lead capture.

Budgety — Budgeting Web App

[GitHub](#) · [Live](#)

JavaScript, HTML, CSS

- Budgeting app for tracking income and expenses with automatic balance and percentage calculations, built in vanilla JavaScript using the module pattern.

EDUCATION

Avion School — Full-Stack Web Development

600+ hours intensive full-stack training · 2021

EARIST — B.S. in Applied Physics (Computer Science Emphasis)

2020
